

Starter Artifact Pack — Scenarios, SOP Corpus & Footage

What this pack is: the actual content artifacts that Ch. 19 specifies but the spec itself could not contain. Everything here is copy-paste-ready for the repo (`scenarios/` , `corpus/` , `footage/`). Authored per the military scope decision; SC-8 is the single HADR entry retained as the Ch. 14 benchmarking link.

Contents

1. **Scenario YAML Files (SC-1...SC-8)** — full scenario definitions in the Ch. 7 DSL, ready for `scenarios/` .
2. **SOP Corpus (15 documents)** — SOP-01..08, REF-01..04, POL-01..03, each with chunking metadata, ready for `corpus/` .
3. **Footage Sourcing Guide** — the one artifact that cannot be authored as text: where to get free, license-clean aerial footage, plus the processing manifest.

Repo placement

```
repo/  
├─ scenarios/           # one .yaml per scenario (page 1)  
├─ corpus/             # one .md per document (page 2)  
│   ├─ sop/   ref/   pol/  
└─ footage/           # sourced clips + manifest.yaml (page 3)
```

Ground rules

- Scenario files use **only** the whitelisted DSL actions and condition functions from Ch. 7 §7.3, plus one loader-side addition flagged explicitly below:
`entity_groups` (syntactic expansion to N entities — implement in the Phase 1 scenario loader, ~30 lines).
- All corpus documents are **original mock doctrine** — no copied military manuals, no copyright or classification issues (Ch. 19 §19.2 requirement).
- SC-2 remains the canonical golden-run fixture: seed and timeline in its YAML are frozen once Ch. 11's golden-run test is recorded. Change = new fixture recording, deliberately painful.

Footage Sourcing Guide — Vision Pipeline Inputs

Scenario YAML Files — SC-1 ... SC-8

SOP Corpus — 15 Documents (SOP / REF / POL)
